OBJECTIVE

Aspiring Cybersecurity Analyst with strong knowledge of network protocols (TCP/IP), Windows/Linux systems, and hands-on experience in SIEM monitoring (Splunk), log analysis, and incident response. Familiar with cybersecurity frameworks like NIST, ethical hacking concepts, and threat detection techniques. Seeking an entry-level role to apply analytical and problem-solving skills in real-world security monitoring and incident handling environments.

SECURITY & SOC SKILLS

- Security Monitoring & SIEM: Splunk, Elastic Stack (ELK) Alert Triage, Event Correlation
- Network & Systems: TCP/IP, Windows, Linux
- Threat Detection & Incident Response: Log Analysis, MITRE ATT&CK, Incident Response Lifecycle
- Security Tools: Wireshark, Sysmon, Nessus, Kali Linux, VirusTotal
- Cybersecurity Concepts: Ethical Hacking, Vulnerability Management, Firewalls

TOOLS & TECHNOLOGIES

- Splunk
- Sysmon
- Wireshark
- Nessus
- Kali Linux
- VirusTotal
- Elastic Stack (Elasticsearch, Logstash, Kibana)

PROJECTS

Endpoint Security Monitoring (Sysmon)

- Configured Sysmon for endpoint telemetry
- Analyzed process creation, network connections, and registry changes
- Improved understanding of endpoint-based attack detection

SOC Monitoring & Incident Analysis (TryHackMe Labs)

- Performed alert triage and escalation for simulated SOC alerts
- Analyzed authentication logs to detect brute-force and suspicious login attempts
- Investigated EDR alerts to identify malicious process activity and suspicious endpoint behavior
- Analyzed process trees, parent-child relationships, and network connections during endpoint investigations
- Used Splunk and Elastic Stack (ELK) to perform log analysis, create dashboards and investigate security events
- Visualized security logs using Kibana dashboards to identify anomalies and suspicious patterns

HANDS-ON TRAINING & LABS

- Completed SOC Level 1 Learning Path on TryHackMe, gaining hands-on experience with SIEM tools including Splunk and Elastic Stack
- Explored MITRE ATT&CK and MITRE D3FEND frameworks through hands-on labs, analyzing attacker techniques, defensive mappings and SOC detection strategies.

- Performed alert triage and incident investigation in simulated SOC environments
- Analyzed authentication logs and endpoint activity
- Practiced security monitoring using **Splunk** and **Sysmon**
- Practiced log ingestion, search queries and visualization using **Elastic Stack** (elastic search & Kibana)
- Built behavioral and IOC-based detections for malware activity by analyzing sandbox telemetry, network beaconing, DNS activity and attacker TTPs using Sigma rules and MITRE ATT&CK techniques.

CERTIFICATIONS

- Cybersecurity & Ethical Hacking – Boston Institute of Analytics
- Cybersecurity Analysis & Design – NASSCOM
- Network Essentials – CISCO
- Cloud Computing – IBM

INTERNSHIP

Junior Application Development Intern – Learning Bot (Mar 2023-Apr2023)

- Assisted in application development and debugging.
- Gained exposure to secure coding practices and application workflows.
- Collaborated with team members to understand real-world SDLC processes.

EDUCATION

- BTech, Information Technology - Panimalar Institute of Technology (2025)
- HSC - Sri Chaitanya Junior College (2021)
- SSLC - Sasi English Medium High School (2019)

LANGUAGES KNOWN

- Telugu – Native
- English – Fluent
- Tamil – Intermediate
